

US005721449A

United States Patent [19]

Panuce

[11] Patent Number: 5,721,449

[45] Date of Patent: Feb. 24, 1998

[54] CAM OPERATED INVERTER BYPASS SAFETY SWITCH

[75] Inventor: Donald G. Panuce, South Barrington, Ill.

[73] Assignee: Advance Controls, Inc., Wood Dale, Ill.

[21] Appl. No.: 603,657

[22] Filed: Feb. 20, 1996

ABSTRACT

An inverter by pass safety switch for rerouting electrical power either through or around AC variable frequency inverter drives during electrical disturbances, thus allowing a motor to continue operation. The switch works in a mechanical fashion, and comprises a contact block containing electrical contacts and cams operably connected to the contacts and mounted on a shaft that can be turned by an operator. The cams are shaped and mounted on the shaft in such a way to provide a desired switching pattern when the shaft is manually rotated.
